The **Swiss Army Knife**
to **hacks** and **crashes**?

LGFG

Christian Spann
Ulm University

“
We are increasingly dependent on services provided by computer systems
and our vulnerability to computer failures is growing as a result.”

Miguel Castro

Conclusion

- $2f + 1$ Replicas
- Can cope with max f benign failures
- Inconsistent states possible
- But can be fixed

Paxos Algorithm by

L. Lamport

“A distributed system is one in which the failure of a computer you didn't even know existed can render your own computer unusable”

**Sometimes
something is wrong**

The Byzantine Generals Problem

We only trust
the Mailsystem

© Photo by Dani Sardà i Lizaran on Flickr

The Byzantine Generals Problem

Can only be solved with a majority
of $2/3$ of correct nodes!

Why?

Byzantine Agreement

Replicated service with
read/write operations on a variable

PBFT by Castro und Liskov

- Leader – Backup algorithm
- Mutual Authentication
- 3 phase commit protocol
- Leader proposes ordering of requests
- Backups validate that leader is correct

BFT visualised

More facts on PBFT

- View Change – protocol for leader election
- Optimized through MACs
- Proactive recovery (PBFT)

Still we need
3 Steps!

Conclusion

- Strict fault-tolerance
- Not scalable
- Quite a few different solutions
- Adaptation could improve performance

Thank you!
